PROFILE

Software Engineer with experience designing and delivering technology solutions that bridge business requirements and technical implementation. Experienced in working with clients to understand business processes, identify opportunities for improvement, and translate complex requirements into practical end-to-end solutions across applications, APIs, databases, and system integrations. Combines hands-on engineering experience with a strong interest in technology strategy, solution design, and helping businesses leverage technology to improve how they operate.

EDUCATION

Bandung Institute of Technology, *Bachelor of Informatics Engineering*

2019 - 2023

KEY SKILLS & COMPETENCIES

Skillset - Analytical Thinking, Technical Solution, Solution Designs

Toolset - Typescript, React, NextJS, Python, FastAPI, Redis, Docker

WORK EXPERIENCES

Harian Kompas, *Frontend Development Intern*

May 2022 - Aug 2022

- Worked on 'Tutor Visual' project using Vue.js
- Giving ideas and POC either from a user perspective or developer perspective.

Akhdani Reka Solusi, *Frontend Developer*

Nov 2022 - Apr 2023

- Worked on re-engineering project using React by refactoring code to become more effective and efficient in using library, fix existing bugs, make a new feature by implementing from figma and fetch API from the documentation.

Masa AI, *Software Engineer*

Apr 2023 - Present

- Develop and maintain a fleet management platform for a mining company, supporting real-time monitoring and management of nearly 600 fleet units.
- Design and develop backend services, RESTful APIs, database structures, and third-party integrations using Python, FastAPI, PostgreSQL, and Redis.
- Develop frontend applications using React, Next.js, and TypeScript, including live fleet tracking with WebSockets, authentication, CRUD workflows, and integrations with backend services.
- Optimize frontend performance for large-scale live tracking, addressing rendering and data-update bottlenecks to maintain a responsive interface as the number of tracked units increases.
- Independently drive two client-facing commodity trading applications, handling frontend development and the majority of backend development from feature design through implementation, testing, debugging, and iteration.
- Work directly with clients to gather requirements, understand business workflows, demonstrate product updates, and translate business problems into end-to-end technical solutions.
- Propose and implement workflow improvements that simplify manual processes, including file-based data ingestion and automated calculations triggered by shipment approval, reducing unnecessary application complexity and manual operations.
- Design application flows and technical solutions by balancing client requirements with existing business processes, while collaborating with internal engineering leadership on initial requirements and production deployment.

AWARDS & CERTIFICATES

Beasiswa Luar Biasa (BLB 6), *Scholarship Grantee*

2020 - 2021
